What is EcoOne?

EcoOne Spa Treatment is the easiest to use and safest spa water conditioner on the market today.

With EcoOne the Spa water will be kinder to your skin (and the environment), remain crystal clear and benefit from reduced odour, foaming and scum lines.

EcoOne is a unique formulation of Natural enzymes, minerals, and plant extracts and **does not** contain chlorine, bromine or other harsh chemicals.

EcoOne will greatly reduce your need for the vast majority of your spa water care chemical regime.

One bottle of EcoOne in conjunction with a non-chlorine shock treatment will effectively keep your spa water crystal clear and odour free for 30 days or more.

The EcoOne Advantage!

Eliminates skin and eye irritation.

Helps eliminate foam.

No more scum lines.

Helps maintain a balanced pH and alkalinity.

Increased filter efficiency and easier cleaning.

Reduces the concentration of spa chemicals required including: sanitiser, pH control, anti-foam etc.

Will not fade swimwear

Naturally makes your water feel softer.

EcoOne is compatible with all sanitizer or oxidizer systems including ozone, chlorine, bromine and biguanide systems.

How Does It Work?

Powerful yet gentle cleansers: EcoOne contains a powerful blend of cleansers that naturally break down suntan oil, body lotions, and other unwanted contaminants, dissolving them harmlessly and eliminating the cause of unsightly scum and foam.

Flocking Agents: EcoOne contains pure organic compounds that are naturally attracted to contaminants and minerals in the water, causing them to combine into larger particles that are easily caught in the filter. This natural flocking action keeps your water crystal clear for a full month.

Natural Water Softeners: The natural water softening minerals in EcoOne reduce the surface tension of the water and help prevent scale from forming. The water feels soft and equipment is protected.

Enzymes: The secret to EcoOne is the proprietary blend of powerful enzymes, that accelerate natural bio-processes and keep your spa water sparkling clean without the "chemical soup," odour and skin irritation associated with traditional spa water treatment products.

Why Enzymes?

Enzymes exist in all organic (naturally occurring) material, they are microscopic molecules that act as a catalyst (they accelerate a chemical reaction) and are commonly found in;

Detergents - To break down; blood, fat, perspiration and grass stains.

Brewing - They are bound to malt so starch is converted into sugar thus ensuring fermentation

Baking - It is the enzyme in the yeast which converts dough to bread.

A brief guide to Enzyme function:

Lipase and Cellulase

Soften the fatty exterior walls of microscopic cells, causing them to rupture more easily.

Amylase and Protease

Help break down starches and proteins.

Oxidase and Hydrolase

Increase oxidation and promote the rapid degradation of many substances.

EcoOne only uses "food grade" enzymes, blends them with a coconut oil base and seaweed extracts to create a natural and highly effective formulation.

As the EcoOne solution combines with your spa water, the coconut oil is released and partially coats the filter cartridge, this improves filtration and makes cleaning the filter much easier.

Coconut oil has the added benefit of being an excellent skin conditioner!

The result is much healthier water - Fresh, Clean and Clear without fear of exposure to harsh chemicals and their negative side effects.

EcoOne will keep up to 2,200 litres of water looking and feeling great for one month with average use. If you use your spa 3 to 5 days a week for twenty minutes each day, we consider that average use. Heavier use may require more frequent additions of Eco One.

EcoOne Label Information

Rinse hands thoroughly after handling Eco One products.

Do not take internally.

If accidental ingestion should occur, drink water.

If allergic to certain foods such as coconut or seaweed, contact your doctor.

Eco One Monthly can be very slippery when dropped.

Exercise caution in spill areas. Soak up spilled product with cat litter or a floor mop.

There are no special disposal requirements.

Product contains: natural enzymes, minerals, coconut, potassium salts and lemon fragrance.
